

Goal 17: Strengthen the means of implementation and revitalize the global partnership for sustainable development

17.1 Strengthen domestic resource mobilization, including through international support to developing countries to improve domestic capacity for tax and other revenue collection

17.1.1 Total government revenue as a proportion of GDP, by source

Indicator Classification

Global SDG Indicator	Yes
Proxy	No
Supplemental	No

Definition

Global Definition

Organization for Economic Cooperation and Development presents the total government revenue as the total tax revenues received by the national government during the year which includes personal and corporate income taxes, taxes on property, value added taxes, excise tax, tariffs, customs duties and social security contributions. The government follows the 2008 System of National Accounts.

National Definition

National Government Total Revenues is the collections of the National Government from tax and non-tax sources.

The Revenue District Officees (RDOs) of the BIR process and prepare the BIR 1209 report and submit it to the Collection Unit of the Regional Office. All the 1209 reports submitted by the RDO are then transmitted to the Revenue Accounting Division (RAD) of the National Office (NO). The RAD processes/encodes/prints/analyzes the 1209 reports. If there are no discrepancy in the reports, the RAD consolidates and prepares the collection reports for submission to Top Management / Statistics Division. In case there are discrepancy, the RAD informs the RDO/Region concerned through phone / letters of any discrepancy noted in the 1209 reports for appropriate action. GDP follows the definition used in the 2008 SNA.

Method of Computation

Global

Data on tax revenues are recorded without offsets for the administrative expenses connected with tax collection. GDP follows the definition used in the SNA.

National

Total government revenue divided by the total gross domestic product

Remarks (Source of possible discrepancies with the global data)

Goal 17: Strengthen the means of implementation and revitalize the global partnership for sustainable development

Target 17.3: Mobilize additional financial resources for developing countries from multiple sources

17.3.1 Foreign direct investments (FDI), official development assistance and South-South Cooperation as a proportion of total domestic budget

Indicator Classification

Global SDG Indicator	Yes
Proxy	No
Supplemental	No

Definition

Global Definition

ODA PART: ODA disbursements

National Definition

Foreign Direct Investment is defined as an international investment by a resident entity in one economy ("direct investor") in an enterprise resident in another economy ("direct investment enterprise") made with the objective of obtaining a lasting interest. The "lasting interest" implies the existence of long-term relationship between the direct investor and the enterprise and a significant degree of influence on the management of the enterprise. This lasting interest is generally indicated by ownership of at least 10 percent of the ordinary shares or voting power (for incorporated enterprise) or the equivalent (for an unincorporated enterprise). FDI covers equity capital, reinvested earnings and other capital (i.e. inter-company loans).

Method of Computation

Global

ODA is tracked and monitored by the OECD DAC so that individual donor efforts are measured alongside the wider array of resources that are available to developing countries. We inform donors about where aid should be targeted, and provide a clearer picture of the resource flows available to developing countries.

National

sum of FDI, ODA and South-South Cooperation divided by the total domestic budget

Remarks (Source of possible discrepancies with the global data)

Goal 17: Strengthen the means of implementation and revitalize the global partnership for sustainable development

Target 17.3: Mobilize additional financial resources for developing countries from multiple sources

17.3.1 Volume of remittances (in United States dollars) as a proportion of total GDP

Indicator Classification

Global SDG Indicator	Yes
Proxy	No
Supplemental	No

Definition

Global Definition

Personal remittances received as a proportion of GDP is the inflow of personal remittances expressed as a percentage of GDP

National Definition

OFs' Remittances by Country and by Type of Worker

This refers to statistics on cash remittances coursed through commercial banks, thrift banks, and foreign exchange corporations of sea-based and land-based OF workers, classified by source country.

Personal Remittances Personal remittances covers

- net compensation of employees (i.e., gross earnings of land-based OF workers with work contracts of less than one year and of sea-based workers, less their expenditures in their host countries)
- personal transfers
- current transfers in cash or in kind by OF workers with work contracts of one year or more
- other household-to-household transfers between Filipinos who have migrated abroad and their families in the Philippines
- capital transfers between households (i.e., the provision of resources for capital formation purposes, such as for construction of residential houses, between resident and non-resident households without anything of economic value being supplied in return).

Method of Computation

Global

Personal remittances are the sum of two items defined in the sixth edition of the IMF's Balance of Payments Manual: personal transfers and compensation of employees. WB staff estimates on the volume of personal remittances data are used for gap-filling purposes. GDP data, sourced from WB's World Development Indicators database, are the used to express the indicator as a percentage of GDP.

National

Conformity with standards: The compilation of personal remittances, including data sources and methodologies used,

conform to the internationally accepted standards and guidelines set out in the International Monetary Fund's (IMF) Balance of Payments and International Investment Position Manual, 6th Edition (BPM6).

Data Sources: The data are sourced primarily from reports submitted by banks through the International Transactions Reporting System (ITRS). Remittances in kind are computed using parameters derived from the results of the Survey on Overseas Filipinos (SOF) conducted by the Philippine Statistics Authority (PSA).

Periodicity: OF Remittances Statistics are published every 15th day of the month (or the next working day if the 15th falls on a weekend or is a non-working holiday) with two-month lag. Revisions, if any, are effected in the next reporting period.

Valuation: Transactions are valued at market prices.

Remarks (Source of possible discrepancies with the global data)

Goal 17: Strengthen the means of implementation and revitalize the global partnership for sustainable development

17.4 Assist developing countries in attaining long-term debt sustainability through coordinated policies aimed at fostering debt financing, debt relief and debt

17.4.1 Debt service as a proportion of exports of goods and services

Indicator Classification

Global SDG Indicator	Yes
Proxy	No
Supplemental	No

Definition

Global Definition

Debt service as a proportion of exports of goods and services is the percentage of debt services (principle and interest payments) to the exports of goods and services. Debt services covered in this indicator refer only to public and publicly guaranteed debt

National Definition

Total Debt Service is the sum of debt amortization and interest payments on domestic and foreign borrowings.

Method of Computation

Global

Public and publicly guaranteed external debt data are compiled by WB based on the WB Debtor Reporting System Manual, dated January 2000 which sets out the reporting procedures to be used by countries. The data are provided by the countries on a loan by loan basis.

"Exports on goods and services" data are sourced from the IMF's Balance of Payments Statistics Database and then gap-filled with WB staff estimates in accordance with the sixth edition of Balance of Payments and International Investment Position Manual (BPM6)

National

Total Debt Service is the sum of debt amortization and interest payments on domestic and foreign borrowings.

- Goods: Data on goods are based on customs data, which the Philippine Statistics Authority (PSA) processes and consolidates. The PSA compiles the foreign trade statistics (FTS) using the general trade system, in which the national boundary serves as the statistical frontier. In the balance of payments, both imports and exports are valued f.o.b. at the customs frontier. For balance of payments purposes, the BSP undertakes adjustments on PSA FTS, as follows:
 - a) exclude goods that do not involve change in ownership such as consigned, returned/replaced, and temporarily imported/exported goods;
 - b) include goods that are not captured in FTS such as overseas Filipinos' (OFs) remittances in kind, fish bought/sold in high seas, goods imported by resident airlines and shipping companies; goods exported to foreign airlines, and goods sold under merchanting; and
 - c) adjustments to account for the undervaluation of consigned exports/imports, particularly electronics and garments.
- Services and primary income: The main source is International Transactions Reporting System (ITRS), except for the following: (a) passenger transportation are based on Civil Aeronautics Board's (CAB) reports on local airlines operating abroad and foreign airlines operating in the Philippines; (b) freight transportation services are sourced from the FTS, (c) travel receipts are based on the Visitors Sample Survey (VSS) while travel imports are partly based on reports of Credit Card Association of the Philippines (CCAP) on usage of locally issued cards abroad, (d) interest payments of the nonbank sectors are based on information from the external debt statistics, (e) interest income and payments of the BSP are based on its accounting records, and (f) reinvested earnings are based on financial statements of foreign-owned companies and the foreign direct investment (FDI) survey for non-banks and on banking statistics for banks' unremitted profits and reinvested earnings. Other sources that complement the ITRS are the Cross-border Transactions Survey (CBTS) and other administrative data.

Remarks (Source of possible discrepancies with the global data)

Goal 17: Strengthen the means of implementation and revitalize the global partnership for sustainable development

Target 17.8: Fully operationalize the technology bank and science, technology and innovation capacity-building mechanism for least developed countries by 2017 and enhance the use of enabling technology, in particular information and communications technology

17.6.2 Fixed Internet Broadband subscriptions per 100 inhabitants, by speed

Indicator Classification

Global SDG Indicator	Yes
Proxy	No
Supplemental	No

Definition

Global Definition

The indicator fixed Internet broadband subscriptions, by speed, refers to the number of fixed-broadband subscriptions to the public Internet, split by advertised download speed.

The indicator is currently broken down by the following subscription speeds:

- 256 kbit/s to less than 2 Mbit/s subscriptions: Refers to all fixed broadband Internet subscriptions with advertised downstream speeds equal to, or greater than, 256 kbit/s and less than 2 Mbit/s.
- 2 Mbit/s to less than 10 Mbit/s subscriptions: Refers to all fixed -broadband Internet subscriptions with advertised downstream speeds equal to, or greater than, 2 Mbit/s and less than 10 Mbit/s.
- Equal to or above 10 Mbit/s subscriptions (4213_G10). Refers to all fixed -broadband Internet subscriptions with advertised downstream speeds equal to, or greater than, 10 Mbit/s.

National Definition

Fixed Wireless Broadband" refers to a data connection using fixed wireless technologies. For Fixed Wireless, the measurement shall be done at the "IN" port of the fixed wireless modem

Method of Computation

Global

ITU collects data for this indicator through an annual questionnaire from national regulatory authorities or Information and Communication Technology (ICT) Ministries. The data can be collected by asking each internet service provider in the country to provide the number of their fixed broadband subscriptions by the speeds indicated. The data are then added up to obtain the country totals.

National

Number of fixed internet broadband subscriptions, by speed

17.8.1 Proportion of individuals using the Internet

Indicator Classification

Global SDG Indicator	Yes
Proxy	No
Supplemental	No

Definition

Global Definition

The indicator proportion of individuals using the Internet is defined as the proportion of individuals who used the Internet from any location in the last three months.

National Definition

Exposure to mass media in FLEMMS includes the surfing internet such as sending/receiving emails, researching through the internet, surfing/searching through the internet. Included here are those who sends/receives email or uses internet through cellphones.

Method of Computation

Global

For countries that collect that data on this indicator through an official survey, this indicator is calculated by dividing the total number of in-scope individuals using the internet (from any location) in the last 3 months by the total number of in-scope individuals. For countries that have not carried out a survey, data are estimated by ITU based on the number of internet subscriptions and other socioeconomic indicators (GNI per capita) and on time series data.

National

Number of Filipinos 10-64 years old exposed to internet for social media and research divided by population aged 10-64.

Remarks (Source of possible discrepancies with the global data)

Goal 17: Strengthen the means of implementation and revitalize the global partnership for sustainable development

Target 17.19: By 2030, build on existing initiatives to develop measurements of progress on sustainable development that complement gross domestic product, and support statistical capacity-building in developing countries

17.19.2 Proportion of countries that (a) have conducted at least one population and housing census in the last 10 years; and (b) have achieved 100 per cent birth registration and 80 per cent death registration

Indicator Classification

Global SDG Indicator	Yes
Proxy	No
Supplemental	No

Definition

Global Definition

The indicator tracks the proportion of countries that have conducted at least one population and housing census in the last 10 years. This also includes countries which compile their detailed population and housing statistics from population registers, administrative records, sample surveys or other sources or a combination of those sources.

According to the Principles and Recommendations for a Vital Statistics System, Revision 3 (<https://unstats.un.org/unsd/demographic/standmeth/principles/M19Rev3en.pdf>), a complete civil registration is defined as: "The registration in the civil registration system of every vital event that has occurred to the members of the population of a particular country (or area), within a specified period as a result of which every such event has a vital registration record and the system has attained 100 per cent coverage."

National Definition

The indicator tracks the proportion of countries that have conducted at least one population and housing census in the last 10 years. This also includes countries which compile their detailed population and housing statistics from population registers, administrative records, sample surveys or other sources or a combination of those sources.

According to the Principles and Recommendations for a Vital Statistics System, Revision 3 (<https://unstats.un.org/unsd/demographic/standmeth/principles/M19Rev3en.pdf>), a complete civil registration is defined as: "The registration in the civil registration system of every vital event that has occurred to the members of the population of a particular country (or area), within a specified period as a result of which every such event has a vital registration record and the system has attained 100 per cent coverage." Indicator 17.19.2(b) has two parts; the first concerning the birth registration and the second concerning the death registration of each individual country or area.

Method of Computation

Global

The two sub-indicators of the indicator 17.19.2(b) are expressed as proportions: at the global level, the proportion of countries that have achieved 100 per cent birth registration is measured as the number of countries that have achieved 100 per cent birth registration to the total number of countries. The computation is done in an analogous manner for the death registration part as well as for the regional measurements of both birth and death registration sub-indicators.

National

In the monitoring of 17.19.2 (a), the conduct of the population and housing census in the last 10 years will be monitored, Yes if the population and housing census was conducted in the last 10 years. Further, the year conducted will also be monitored.

In 17.19.2 (b), the percentage of birth registration and death registration will be monitored annually.
